Dear Ms. Ferguson,

I'm applying for the Entry-Level Data Analyst position at InsightEdge. As a recent business analytics graduate, I'm excited to translate data into meaningful patterns and reports that help teams make smarter decisions.

In university, I led a capstone project analyzing ecommerce trends using SQL, Tableau, and Python. That project improved forecasting accuracy by 18% for our case study partner. I'm confident those same analytical instincts and software fluency will allow me to support your data team right away.

Thanks for considering my application.

Best,
Jalen Brooks
