

**Dear Dr. Evans,**

With over seven years of experience in computational biology and a master's degree in computer science, I'm applying for the Bioinformatics Specialist position at Vertex Biosciences.

In my role at BioGenetix, I implemented optimized genome data parsing scripts that reduced pipeline runtime by 25%, and I helped migrate legacy analysis tools to cloud infrastructure. I'm deeply familiar with Python, R, and containerization workflows.

I'm excited by your team's recent work on gene-drug interaction modeling and would love to contribute to its next phase.

Sincerely,  
Natalie Choi
