

Dear Search Committee,

I am applying for the postdoctoral researcher role in systems security at the University of Michigan's School of Computer Science. My PhD dissertation at MIT focused on memory-safe language enforcement at the compiler level.

Over the past five years, I've published six peer-reviewed papers on LLVM and binary hardening, and contributed patches to Rust and Clang. I'm particularly interested in your lab's work on formal verification of low-level systems.

Thank you for the opportunity to be considered.

Best,
Dr. Thomas Abrahams
